PRODUCT UPDATE · 28 OCT 2026 · COMMIT F3860B2

Uiverse features.

Everything the app does today, newest first. Find a real interface, see exactly how it's built, and hand it to your AI tool to build — or start from a sketch or a screenshot of your own. Keep what you find on a board for each project.

45	25	2	422
live pages, from 30 brands	Arabic / RTL brands	languages: English & العربية	automated tests passing

NEW Shipped since 27 Oct

Boards
A board for each project, Pinterest-style, with a cover, name and description. Pin one design to as many boards as it fits.

Notes
Write why you kept a design; the note follows it onto every board. All saves and Unsorted are built in.

More like this
Every design runs on into a feed of the ones most like it — same type, industry and style, close colours, same device.

Upload finds matches
Drop a screenshot on Upload and the closest designs already on Uiverse appear under it. The image stays in your browser.

01 Browse & search

- → **Feeds** for Web, Apps, Components, 3D, Layouts and Palettes
- → **Filters** only show options with results
- → **Search (⌘K)** understands phrases, synonyms and Arabic
- → **Search by image** closest designs to a screenshot, also on Upload NEW
- → **Explore** by industry, type and style
- → **Sources** everything captured from one site
- → **Featured pick** and Popular

02 Design details

- → **Breakdown** colours, fonts, spacing and sections — measured on live captures, marked illustrative on samples
- → **Copy any value** with one click
- → **Export** to CSS, Tailwind or SwiftUI, free
- → **Real page types** pricing, product and about pages
- → **Overlay or full page** open details without losing your place
- → **More like this** a feed of the closest designs under each one NEW

03 Saving & accounts

- → **Save any design** to see it again in All saves
- → **Boards** one per project, a design on many NEW
- → **Notes** on each saved design NEW
- → **Sign in by email link**; Google & GitHub ready
- → **Synced** boards and notes across devices; guest saves move in on sign-in
- → **Delete account** with a typed confirmation

04 Prompt generator

- → **Ready-to-paste build prompt** for any design, layout or palette, right-to-left aware
- → **Sketch to prompt** from boxes you draw

Claude · ChatGPT · Cursor · Codex · v0 · Lovable · Bolt · Next.js · React · HTML · Vue · SwiftUI

05 Trust & safety

- → **Takedown & opt-out** one form removes a whole domain
- → **Attribution** source and live link on every capture
- → **No brand copy** prompts never carry a real brand's name, words or font
- → **Privacy policy** in English and Arabic
- → **Honest labels** no invented counts; samples say they're samples

06 Design & quality

- → **Two languages** English and Arabic, mirrored right to left
- → **Arabic share cards** shaped and laid out right to left
- → **Responsive** phone, tablet and laptop
- → **Accessible** keyboard and screen-reader friendly
- → **MCP server** five tools for Claude Code, Cursor and other agents

07 Pricing

FREE
Browsing, saving, boards, filters, the full Breakdown, every export — and 3 prompts a month.

PAID
Generated prompts only. Each prompt is charged once, and copying it again is free.

SITE ANALYSIS · 28 OCT 2026

Where it stands.

An area-by-area read of the whole app: what's ready, what's built but waiting on production setup, and what's still a preview.

AREA	STATE	WHAT'S LEFT
Browse, search, Breakdown, prompts	READY	More real captures — 45 live pages from 30 brands; the rest of the feed is 68 sample screens from 26 invented brands. 15 sites refused automated capture and are left alone.
Sketch, find similar & more like this	READY	No AI model: image matching (Find similar and Upload) uses colour and device, not layout, and sketch block types are guessed from position and shape. More like this also weighs type, industry and style.
Arabic interface	READY	A native-speaker review of the machine-drafted Arabic strings before launch.
Accounts, saves & boards	NEEDS SETUP	Supabase database, auth secret and Resend email in production — the Vercel setup in progress. Boards work for guests today; syncing them needs the new board migration run on that database.
Account deletion	READY	Ships with accounts. Needs a sign-in from the last hour; clears unused sign-in links.
Takedown & opt-out	NEEDS SETUP	An inbox for requests (email or webhook). Without one, production refuses rather than drop them.
Search engines & sharing	READY	Done: share images on every page, and Arabic share cards on Arabic pages.
Agents (MCP server)	READY	Rate limits are per server instance; a shared limit is needed at scale.
Images at scale	OPTIONAL	Cloudflare R2 bucket — not needed until there are many more captures.
Pricing & billing	GAP	No billing yet, and the free prompt allowance is counted in the browser, so it's easy to reset. Move it to the account before charging.
Privacy	READY	Policy at /legal/privacy in both languages, written from what the code does; contact info@uiverse.tech.
Upload, layout builder	PREVIEW	Upload now reads a dropped screenshot and shows the designs like it, but submitting still saves nothing. The layout builder is still "coming soon".

How it was checked

422	4	33
unit tests	browser suites	QA findings closed

Types, lint, unit tests, the build and the browser suites run on every push. Tests caught problems no tester saw:

- **Brand fonts in prompts** — 4 brands' custom typefaces leaked their names
- **Lost saves** — a change cut off by leaving the page; now kept
- **Blank captures** — 5 of 26 pages were broken; a 40%-blank check now rejects them
- **Mixed devices** — phone results in a desktop image search; device is now a filter

Launch checklist

- [x] Code on GitHub, building cleanly
- [x] Privacy policy page
- [ ] Supabase project + database migrations (incl. boards)
- [ ] Auth secret and site URL in Vercel
- [ ] Resend with a verified sending domain
- [ ] Takedown inbox (email or webhook)
- [ ] Optional: Google and GitHub sign-in, R2 bucket

The repository is public, including the captured screenshots — make it private if that isn't intended.

Biggest risks

1. **Thin real content.** 45 live pages against a 3,000-screen launch target; sample designs fill the feed and are kept out of search results.
2. **Prompt allowance is bypassable** until it lives in the account.
3. **Unreviewed Arabic** in front of Arabic-speaking users.
4. **Image search is colour-only.** Two pages in the same palette match equally, whatever their layout.

Next, in order

1. Finish the Vercel + Supabase setup and go live
2. Capture more real sites — the biggest lever on quality
3. Native-speaker pass on the Arabic
4. Move the prompt allowance into accounts, then billing
5. Image search that weighs layout, not only colour
6. Upload that saves, and the layout builder
7. Shared boards — read-only links first
